Tulan Setu

Setup & User Guide

Windows app for TallyPrime · tulan.in · October 2026

Before You Begin

> **Back up your company data first**
>
> Take a complete backup of your Tally company data before installing.
>
> In Tally Prime: `Gateway of Tally` > `Company` > `Backup`
>
> Tulan Setu writes vouchers directly into your company. A backup is the only way to undo a bulk push if something is set up wrongly.

You will need:

- Tally Prime 6.0 or later, installed and running on the same computer
- Windows 10 or 11, 64-bit
- An internet connection, for activation, updates and the phone app
- TulanSetu_Setup.exe, from the download at tulan.in

Step 1 · Connect Tally to Tulan Setu

Tulan Setu reads your books directly from Tally Prime on this computer, through the connection Tally itself provides. Switch it on once.

In Tally Prime go to: `F1: Help` > `Settings` > `Connectivity` > `Client/Server configuration`

Set these three:

Setting	Set it to
`TallyPrime acts as`	Both
`Enable ODBC`	Yes
`Port`	9000 — the port in Tulan Setu's Tally URL

> **Using a different port**
>
> If another program already uses port `9000`, pick any free port here and enter the same number in Tulan Setu under `Settings` > `Tally URL` — for example `http://localhost:9001`. The two must match.

Accept with Ctrl+A, and restart Tally Prime if it asks you to.

Step 2 · Install Tulan Setu

1. Run TulanSetu_Setup.exe and follow the installer. If the computer lacks Microsoft WebView2, which draws Tulan Setu's screens, the installer fetches it.
2. Start Tally Prime and open your company.
3. Launch Tulan Setu. The status bar reads "Connected to Tally" when it can see your company.

Tally Prime must already be running before you launch Tulan Setu.

Nothing needs to be loaded into Tally. If an earlier version had you add TU_TallyUtilityApp.TDL, it can stay or be removed — Tulan Setu no longer uses it.

Step 3 · Activate your licence

The first time it starts, Tulan Setu opens the **Welcome to Tulan Setu** window. A licence belongs to one computer. The free trial opens every module for 15 days, with no card needed.

1. Press **Start my free trial**. Your browser opens tulan.in with this computer's Machine ID already filled in.
2. Enter your email and your WhatsApp number, and choose **Free trial**. To pay now, choose **Buy yearly** (₹999 a year), or **I have a code** for the activation code in your purchase email.
3. Press **Get my licence key**. Keep Tulan Setu open: it picks the key up by itself within a few seconds and says **You're activated**. The key is emailed to you as well.

> **If the key does not arrive by itself**
>
> In Tulan Setu open `Settings > Manage licence`, choose **I already have a licence key**, paste the key from the page or the email, and activate.
>
> A free trial is issued once per computer. To renew, press `Renew` in Settings before the licence ends. Changing computers? Message us on WhatsApp.

Step 4 · Your books on your phone

Your licence includes the Tulan phone app for Android and iPhone: parties, outstanding bill by bill, ledgers and stock, readable with no signal once a company is on the phone. There is nothing extra to buy.

Install and sign in

1. Install **Tulan – for Tally Users** from Google Play or the App Store.
2. Tap **Sign in with WhatsApp**. WhatsApp opens with a message typed for you: tap Send, then come back to Tulan.
3. Prefer email? Tap **Use email instead** and enter the six-digit code we email you.
4. On a new account, tap **Connect my Tally**. **Try a demo company** shows made-up books, to look around first.

Pair it, then send a company

1. In Tulan Setu open `Mobile App` and press `Pair your phone`. On the phone tap `Scan from computer` and scan the code. One scan attaches this computer and gives the phone the key your books are locked with.
2. No camera? On the phone tap `Get a pairing code instead` and type the code into Tulan Setu.
3. In `Mobile App` press `Add a company from Tally`. It is read, locked with your key and sent to the phone straight away, and the phone downloads it by itself.
4. Turn on `Auto-sync` on the same screen to keep the phone current. Changes go about a minute after something is entered in Tally, and `Sync changes` sends them at once.

Entries you make on the phone reach Tally through Tulan Setu, so they wait until Tulan Setu and Tally are both open on the computer.

Step 5 · Tulan AI

The `Tulan AI` screen in Tulan Setu lists what your phone and AI apps send. An entry waiting for you can be checked, changed, previewed in Tally and approved, and it goes into Tally at once.

Bills and statements read by AI

On the phone, pick a photo or PDF of a purchase bill or a bank statement, and Tulan reads it into an entry for you to check. Scanned bank statements can be read the same way on the `Bank Statement` screen. Each page uses one AI credit, and every account starts with 100 free.

Ask Claude about your books

1. In Claude (website, phone or desktop app) open `Settings > Connectors > Add custom connector`. Name it Tulan and paste `https://mcp.tulan.in/mcp`.
2. Press Connect. On the Tulan page, enter your Tulan email and the code we send, then tick the companies Claude may read.
3. Ask in your own words: who owes me more than ₹1 lakh, how were sales this month. Entries Claude prepares wait for your approval on the phone.

Signed in to the phone with WhatsApp only? Add an email first, under Account > Sign in with email.

Updates

When a new version is released, Tulan Setu tells you what it brings and offers to install it. Click "Update now" and the app downloads and verifies the installer before running it. If verification fails, download the update from tulan.in instead.
